

ABSTRACT

The invention provides a finishing unit (11) for floor covering has a lower section (12b) adapted to engage a floor and an upper section (12a) adapted to engage an adjacent wall, with the area of the lower section (12b) adjacent the upper section (12a) being adapted so that floor covering laid over said area forms a curved surface and wherein the finishing unit is provided with attaching means (14) suitable for attaching the finishing unit to the floor or wall where it is to be used and/or suitable for attaching the finishing unit to the floor covering, a method for using the finishing unit in laying a floor covering and a sealant kit comprising the finishing unit and a front member for sealing a join between edges of floor covering at a corner of an area in which the floor covering is to be laid.
